Summary

Mobile engineer with 3+ years shipping production iOS (Swift, SwiftUI, TCA) and Flutter apps across health, regulated high-traffic consumer platforms, and logistics. Introduced architectural migrations (TCA, BLoC) that raised testability and scalability on apps serving 1M+ users. Hands-on across the full mobile lifecycle: development, testing, CI/CD, and App Store delivery. Full-stack range from independent projects (Spring Boot microservices, Kafka, Kubernetes) pays off in API contract design and collaboration with backend teams.

Technical Skills

Languages	Swift, Dart, Objective-C
iOS	SwiftUI, UIKit, Swift Concurrency, Swift Macros, HealthKit, watchOS, WKWebView, Xcode, Instruments, XCTest
Flutter	BLoC, Platform Channels, Dio
Architecture	TCA (The Composable Architecture), MVVM / MVVM-C, Clean Architecture
Network & Security	URLSession, RESTful APIs, WebSocket, Socket.IO, Keychain, Face ID / Touch ID, AES-256, JWT
CI/CD & DevOps	Fastlane, GitLab CI, GitHub Actions, TestFlight, App Store Connect, Docker, Kubernetes (Helm)
Backend	(project experience) Spring Boot, Kafka, PostgreSQL, MongoDB, Redis

Experience

Mobile Engineer, IMT Solutions — Ho Chi Minh City, Vietnam Aug 2022 – Present

DMS Viettel — Enterprise Distribution Management | Inventory, Orders & Logistics | Flutter Sep 2025 – Present

- Delivered **real-time inventory and order-processing** features used daily by distributors and field-sales teams across Viettel's nationwide distribution network.
- Migrated critical modules to a **BLoC-based architecture**, cutting inter-feature coupling and simplifying state management for a 3-person mobile team.
- Built native camera integration for barcode scanning and document capture via **Flutter platform channels**, eliminating a manual data-entry step and cutting input errors.

JRA — Real-time Horse Racing & Betting Platform (regulated operator) | iOS | 1M+ active users Aug 2024 – Aug 2025

- Led the **MVVM → TCA migration** of core betting modules, improving testability and enabling parallel feature development on a 4-engineer iOS team.
- Built the live race-tracking feed on **WebSocket streams** — **sub-100ms** from message receipt to UI render — with a reconnect-and-backoff connection lifecycle designed to minimize battery drain.
- Hardened authentication with **Face ID / Touch ID** and Keychain-backed storage, plus **AES-256 encryption** at rest for sensitive transaction data, meeting the operator's security-compliance requirements.
- Implemented **Swift Macros** for repetitive data-binding patterns, cutting boilerplate ~30% and speeding up feature delivery.

dadadoo — Multi-tenant Digital Health Platform | iOS & watchOS | clients in 10+ countries Jan 2023 – Jul 2024

- Developed **iOS and Apple Watch** apps in UIKit and SwiftUI with multi-tenant white-labeling for health clients in 10+ countries; shipped Crowdin-based localization without forking the codebase.
- Integrated **HealthKit** for real-time sync of steps, heart rate, sleep, and workouts into the health-scoring engine.
- Eliminated background-thread crashes by refactoring the networking layer to **Swift Concurrency (async/await)**.
- Automated builds, code signing, and App Store submission with **Fastlane + GitLab CI** for same-day hotfix releases.

Projects

Octopus — Real-time Team Collaboration Platform | Flutter, Spring Boot, Kafka, Kubernetes | [GitLab: octopus-mobile](#)

- Architected the Flutter client with **Clean Architecture**, Socket.IO real-time messaging, push notifications, and file sharing.
- Designed a **7-service Spring Boot / Kafka backend** with JWT auth and role-based access control; deployed to **Kubernetes** via Helm charts with GitLab CI/CD.

Independent work (2026): [apple-app-ui-test-automation](#) — a Claude Code plugin for AI-driven UI testing on Apple platforms; [FocusLens](#) — an AI-powered iOS distraction blocker; technical blog and self-hosted portfolio at hoangdh.id.vn.

Education

Industrial University of Ho Chi Minh City (IUH) — Bachelor's Degree in Software Engineering

2019 – 2023
