Summary

Mobile engineer with four years in production development, strongest at realtime and device-connected features: a WebSocket live feed rendering in under 100ms on a betting platform with over a million users, HealthKit / Apple Watch sensor sync for a health platform in 10+ countries, and native camera scanning via Flutter platform channels. Led an MVVM → TCA migration that made a large codebase easier to test and let a four-engineer team work in parallel. Comfortable owning a feature end to end — UI, API integration, testing, release — and working across the mobile-backend boundary (Spring Boot, Kafka, Kubernetes projects); working knowledge of Android (Kotlin, Jetpack Compose). Looking for a mid-level mobile role building products beyond typical apps — realtime, hardware-connected systems like robots.

Technical Skills

Languages	Swift, Objective-C, Dart
iOS	SwiftUI, UIKit, Swift Concurrency, Swift Macros, HealthKit, watchOS, WKWebView, Instruments
Architecture & OOP	TCA, MVVM / MVVM-C, Clean Architecture, OOP & SOLID, design patterns
Networking	URLSession, RESTful APIs, Codable / JSON, WebSocket, Socket.IO
Storage & Security	Keychain, UserDefaults, Core Data, SwiftData, Realm, Face ID / Touch ID, AES-256, JWT
Push & Messaging	APNs, Firebase Cloud Messaging (FCM), UserNotifications (local & remote)
Testing	XCTest, XCUITest
CI/CD & DevOps	Fastlane, GitLab CI, GitHub Actions, TestFlight, App Store Connect, Docker, Kubernetes (Helm)
Flutter	BLoC, Platform Channels, Dio
Android	(working knowledge) Kotlin, Java, Jetpack Compose
AI Engineering	Claude Code (skills, subagents, agent teams, MCP), OpenAI Codex, Gemini CLI
Backend	(project experience) Spring Boot, Kafka, PostgreSQL, MongoDB, Redis

Experience

Mobile Engineer, IMT Solutions — Ho Chi Minh City, Vietnam Aug 2022 – Present

wellgo — Corporate Health & Wellness Platform, Japan | Flutter | EN/JA May 2026 – Present

- Migrating legacy screens onto the team's **MVVM architecture** (BaseView + ViewModel + Repository), decoupling UI from business logic and making view models unit-testable.
- Developing stress-check flows, consultation booking, and health reporting for a bilingual EN/JA product.

DMS Viettel — Enterprise Distribution Management | Inventory, Orders & Logistics | Flutter Sep 2024 – Apr 2026

- Delivered **real-time inventory and order-processing** features used daily by distributors and field-sales teams nationwide.
- Migrated critical modules to a **BLoC-based architecture**, cutting inter-feature coupling and simplifying state management for a 3-person team.
- Built native camera barcode scanning via **Flutter platform channels** (Swift on iOS), eliminating a manual data-entry step.
- Implemented **offline caching** (sqlite / Hive) so field-sales users keep working offline, syncing on reconnect.

JRA — Real-time Horse Racing & Betting Platform (regulated operator) | iOS · Swift · TCA | 1M+ users Aug 2023 – Aug 2024

- Built the live race-tracking feed on **WebSocket streams** — **sub-100ms** from message receipt to UI render — with a reconnect-and-backoff connection lifecycle designed to minimize battery drain.
- Led the **MVVM → TCA migration** of core betting modules, raising testability and enabling parallel work for 4 engineers.
- Hardened authentication with **Face ID / Touch ID** and Keychain-backed storage, plus **AES-256 encryption** at rest for sensitive transaction data, meeting the operator's security-compliance requirements.
- Implemented **Swift Macros** for repetitive data-binding patterns, cutting boilerplate ~30% and speeding up delivery.
- Integrated **Firebase Cloud Messaging (FCM)** push notifications for race results and bet-status updates.

dadadoo — Multi-tenant Digital Health Platform | iOS & watchOS | clients in 10+ countries Jan 2023 – Jul 2023

- Integrated **HealthKit** for real-time sync of steps, heart rate, sleep, and workouts into the health-scoring engine.
- Developed **iOS and Apple Watch** apps in UIKit and SwiftUI with multi-tenant white-labeling for health clients in 10+ countries; shipped Crowdin-based localization without forking the codebase.
- Eliminated background-thread crashes by refactoring the networking layer to **Swift Concurrency (async/await)**.
- Automated builds, code signing, and App Store submission with **Fastlane + GitLab CI** for same-day hotfix releases.

Projects

FocusLens — AI-powered iOS Distraction Blocker | Swift, SwiftUI | independent, 2026 | [GitHub: FocusLens](#)

- Designed, built, and shipped end to end: SwiftUI interface, **Screen Time API** (FamilyControls / ManagedSettings), local notifications, on-device persistence with **SwiftData / Core Data**, and AI-assisted focus suggestions.

Octopus — Real-time Team Collaboration Platform | Flutter, Spring Boot, Kafka, Kubernetes | [GitLab: octopus](#)

- Architected the Flutter client: **Clean Architecture**, Socket.IO messaging, FCM/APNs push notifications, file sharing.
- Designed a **7-service Spring Boot / Kafka backend** (JWT auth, RBAC); deployed to **Kubernetes** via Helm, GitLab CI/CD.

Education

Industrial University of Ho Chi Minh City (IUH) — Bachelor's Degree in Software Engineering

2019 – 2023
