Summary

Software engineer with four years of professional mobile development experience and hands-on full-stack experience through independent projects. Built a commerce and operations platform with NestJS, Next.js, TypeScript and PostgreSQL, covering storefront and admin interfaces, APIs, database migrations, SQL search and third-party data synchronization. Also developed NestJS backend services for a real-time collaboration project. Professional experience includes legacy architecture migrations, offline synchronization, WebSocket features and concurrency troubleshooting. Comfortable owning features across UI, API integration, testing and deployment; seeking a full-stack role building reliable business systems.

Technical Skills

Languages	TypeScript, JavaScript, Java, Kotlin, Swift, Objective-C, Dart
Backend	NestJS, Node.js, Spring Boot, Kafka
Frontend	Next.js, React, TypeScript
Database & ORM	PostgreSQL, Prisma, SQL, schema design & migrations, MongoDB, Redis
API & Integration	RESTful APIs, WebSocket, Socket.IO, data synchronization
Auth & Security	Google sign-in, JWT, RBAC, Keychain, Face ID / Touch ID, AES-256
Testing	Jest, Vitest, XCTest, XCUITest
CI/CD & DevOps	DigitalOcean, Docker, Kubernetes, Helm, GitHub Actions, GitLab CI/CD, Coolify
iOS	SwiftUI, UIKit, Swift Concurrency, HealthKit, watchOS
Flutter & Android	Flutter, BLoC, Platform Channels; Kotlin / Jetpack Compose (working knowledge)
Architecture	Clean Architecture, MVVM / MVVM-C, TCA, OOP & SOLID, design patterns
AI Engineering	Claude Code (skills, subagents, MCP), OpenAI Codex, Gemini CLI

Experience

Mobile Engineer, IMT Solutions — Ho Chi Minh City, Vietnam *Aug 2022 - Sep 2026*

wellgo — *Corporate Health & Wellness Platform, Japan | Flutter | EN/JA* *May 2026 - Sep 2026*
- Migrating legacy screens onto the team's **MVVM architecture** (BaseView + ViewModel + Repository), decoupling UI from business logic and making view models unit-testable.
- Developing stress-check flows, consultation booking, and health reporting for a bilingual EN/JA product.

DMS Viettel — *Enterprise Distribution Management | Inventory, Orders & Logistics | Flutter* *Sep 2024 – Apr 2026*
- Delivered **real-time inventory and order-processing** features used daily by distributors and field-sales teams nationwide.
- Migrated critical modules to a **BLoC-based architecture**, cutting inter-feature coupling and simplifying state management for a 3-person team.
- Built native camera barcode scanning via **Flutter platform channels** (Swift on iOS), eliminating a manual data-entry step.
- Implemented **offline caching** (sqflite / Hive) so field-sales users keep working offline, syncing on reconnect.

JRA — *Real-time Horse Racing & Betting Platform (regulated operator) | iOS · Swift · TCA | 1M+ users* *Aug 2023 – Aug 2024*
- Built the live race-tracking feed on **WebSocket streams — sub-100ms** from message receipt to UI render — with a reconnect-and-backoff connection lifecycle designed to minimize battery drain.
- Led the **MVVM → TCA migration** of core betting modules, raising testability and enabling parallel work for 4 engineers.
- Hardened authentication with **Face ID / Touch ID** and Keychain-backed storage, plus **AES-256 encryption** at rest for sensitive transaction data, meeting the operator's security-compliance requirements.
- Implemented **Swift Macros** for repetitive data-binding patterns, cutting boilerplate ~30% and speeding up delivery.
- Integrated **Firebase Cloud Messaging (FCM)** push notifications for race results and bet-status updates.

dacadoo — *Multi-tenant Digital Health Platform | iOS & watchOS | clients in 10+ countries* *Jan 2023 – Jul 2023*
- Integrated **HealthKit** for real-time sync of steps, heart rate, sleep, and workouts into the health-scoring engine.
- Developed **iOS and Apple Watch** apps in UIKit and SwiftUI with multi-tenant white-labeling for health clients in 10+ countries; shipped Crowdin-based localization without forking the codebase.
- Eliminated background-thread crashes by refactoring the networking layer to **Swift Concurrency (async/await)**.
- Automated builds, code signing, and App Store submission with **Fastlane + GitLab CI** for same-day hotfix releases.

Projects

Mot Doa Thang Ba - *Commerce & Operations Platform* | Independent project | NestJS, Next.js
- Built a Next.js storefront and admin app with NestJS APIs for products, orders, inventory and customer management.
- Built Prisma migrations, SQL search and Pancake / Meta Ads sync; automated deployment with GitHub Actions.

Octopus - *Real-time Team Collaboration Platform* | NestJS, Spring Boot, Kafka, Kubernetes | GitLab: octopus
- Developed NestJS / Spring Boot backend services with Kafka messaging, JWT authentication and RBAC.
- Built a Flutter client with Clean Architecture, Socket.IO messaging, push notifications and file sharing.
- Deployed on DigitalOcean using Docker, Kubernetes and Helm; built GitLab CI/CD pipelines.

Education

Industrial University of Ho Chi Minh City (IUH) — Bachelor's Degree in Software Engineering *2019 – 2023*
